

# ER-Scheme ORACLE User LIMS-API

The entities are SQL views to the IPK-ORACLE *APEXLIMSOPHY* schema/user. The entities are equivalent, but the entities and attributes are translated into English.

Please Note: To keep the diagram readable, not all relationships to groups entity are drawn. This relationship model require access permissions. All entities that have a group\_id attribute link to the group entity to model what data record belongs to which user group.

Please ask D. Schüler, M. Lange for grants to get SQL access to this views or Mehmood Ghaffar to use the REST-API.
